Kiev

SUMMARY

While at university, I studied the basics of programming, learned how to design programs using OOP methodology, organize databases, and much more. I learned a lot about web development from the Java Complex course on OktenWeb. Also, I participated in scientific conferences, in particular in the competition for the defense of research works of the Junior Academy of Sciences of Vinnytsia, it taught me to analyze large data sets and present the results of my work. I am a well-organized developer who is always open to new a task, resistant to hard work and able to find a good way to solve problems.

EDUCATION

Bachelor in Computer Engineering

National Technical University of Ukraine "Igor Sikorsky Kyiv Polytechnic Institute", Kiev

Java-Complex

OktenWeb University, Kiev

PROJECTS

ToDoList | Spring Boot/Angular

<https://github.com/anrysliusar/Todolist>

To-Do list application with basic operations. It allows users to create new to-do lists and add tasks to them. It is also possible to sort tasks in the lists by different fields.

Angular Wiki API
